# TAKE YOUR CRISIS MANAGEMENT SKILLS TO A NEW LEVEL

## DRIVER+ ADVANCED CRISIS MANAGEMENT CONFERENCE

19-20 FEBRUARY 2020 | BRUSSELS

Be part of a unique conference that will report on the EU-funded DRIVER+ project. It will provide valuable new insights into approaches and methodologies for assessing crisis management solutions in light of climate change-related threats such as wildfires and floods. The conference will feature reports and analysis from leading crisis managers and other experts involved with the DRIVER+ project alongside climate change specialists.

Attendees will also have access to a solutions marketplace of technologies and tools tested at DRIVER+ Trials.

## WHAT IS THE DRIVER+ PROJECT AND WHAT WILL BE COVERED AT THE DRIVER+ CONFERENCE?

### UNLOCKING THE INNOVATION POTENTIAL IN EUROPEAN CRISIS MANAGEMENT

DRIVER+ is a pan-European cooperation project tasked with promoting and testing new, science-based innovations in crisis management, to improve response to climate-change related threats such as wildfires and flooding, as well as other threats such as industrial accidents and terrorism.

#### OVERVIEW

In a series of keynotes, plenaries and specialist demonstrations participants will learn about and experience actively:

- the development of a scientifically based trial methodology, the **DRIVER+ Trial Guidance Methodology** for conducting trials of crisis management solutions and the **Test-bed Technical Infrastructure** that underpins it;
- **large-scale trials** conducted in Poland, France, The Netherlands and Austria for assessing technology and other crisis management solutions in realistic scenarios.

There will also be presentations on:

- the establishment of an open, cooperative information-sharing network, the **Crisis Management Innovation Network Europe**
- the DRIVER+ **Portfolio of Solutions** – an online database of crisis management technologies
- the establishment of a network of DRIVER+ **Centres of Expertise** to ensure the sustainability of project outputs

The DRIVER+ Advanced Crisis Management Conference will provide an overview of how crisis management organisations can use the project's outputs to select and evaluate solutions addressing identified crisis management gaps on a thorough, methodological basis. It will constitute an invaluable opportunity to access cutting-edge research, trial feedback and technological solutions assessment insights from leading researchers and practitioners.
